# Access to English-Language Health and Social Services <br> for English-speaking Communities in Quebec -CHSSN-CROP Survey Findings, 2005 and 2010 

Joanne Pocock, PhD
Presentation to CHSSN Exchange Session
March 15, 2011

## Contents

- Introduction
- Service use and Language of Service, 2005 and 2010
- Information about Services in English, 2005 and 2010
- Comfortable Requesting Services in English, 2010
- Access to Services in English, by region, 2010
- Sources of Support in Case of Illness, 2010
- Anticipated Health \& Social Service Needs, 2010

## Introductory notes

- This presentation provides information on certain aspects of health and social service access for the English-speaking minority population of Quebec.
- Information is drawn from the findings of the CHSSN Survey on Community Vitality conducted by CROP Inc. in 2005 and 2010.
- The Community Health and Social Service Network (CHSSN) is a provincial network dedicated to the development of partnerships in health and social services for English-speaking communities in Quebec.
- This project was made possible through funding provided by Health Canada.
- For further regional and comparative information see the CHSSN Baseline Data Report 2010-2011.www.chssn.org.

## About the Survey

- The Survey on Community Vitality collects the opinions, perceptions and expectations of a representative sample of English-speaking Quebecers in each administrative region of Quebec on a variety of issues including health and social services, education, manpower development, culture and communications.
- The current study replicates a previous study done in 2005 with a few modifications to reflect the changing reality of Quebec's English-speaking communities.
- The weighted survey data is based on a sample of 3,195 English-speakers and 1,001 French-speaking Quebeckers. The results of the sample of Frenchspeakers are not presented here. When sample size per region is too small, data is not presented. This applies to the case of the Saguenay - Lac-Saint-Jean region.
- The study of the English-speaking community was a two phase project:
$\AA$ Panel study: some respondents to the 2005 study agreed to participate in the 2010 study ( $\mathrm{n}=1,001$ )
$\AA$ Main study: A sample randomly drawn from 17 administrative regions of Quebec ( $\mathrm{n}=2,194$ )

| Size and Proportion of Anglophone Population, by Health Region, 1996-2006 |  |  |  |  |  |  |

## Notes: Weighting

- For the 2010 study of the Anglophone community, a total of 3,195 Englishspeaking Quebecers aged 18 and over were interviewed over the phone between February 9th, 2010 and March 31st, 2010.
- A sample size of $n=3,195$ has a margin of error of 1.7 point, 19 times out of 20.
- Data was weighted using data from the 2006 census according to:
- Region (the province was divided in 15 different regions), the relative concentration of Anglophones (each region was subdivided in either 2 or 3 subregions according to the relative concentration of Anglophones-low, medium or high concentration ; Montreal was divided in three subregions: West, Centre and East), gender and age
- For the 2005 study of the Anglophone community, a total of 3,129 Englishspeaking Quebecers aged 18 and over were interviewed over the phone between May 6th, 2005 and July 5th, 2005.
- A sample size of $n=3,125$ has a margin of error of 1.8 point, 19 times out of 20.
- Data was weighted using data from the 2001 census according to region, sex and age.

## End
