en français

Antoine Désilets, directeur général
Société Santé en français

Les activités de la SSF sont rendues possible grâce à l'appui de Santé Canada, par l'entremise
du Plan d'action pour les langues officielles – 2018-2023 : Investir dans notre avenir.

Health
Canada

Santé
Canada

We want to acknowledge that the land on which Société Santé en français in Ottawa operates are part of the ancestral unceded territory of the Algonquin Anishinabe people.

Canadian Health Systems and Francophonie

1,000,000+ de francophones vivent en situation minoritaire au Canada.

L'accès à des services de santé en français est difficile ou inexistant.

Les barrières linguistiques réduisent la qualité et la sécurité des services de santé.

Linguistic Barriers Generates Health Inequities

Linguistic barriers in health :

- compromise the **evaluation** of individuals;

- reduce the amount of **information shared** with patients;

- Leads to **poorer diagnostics**, and consequentially to an tendency to prescribe more auxiliary tests;

- hinder **therapeutic management** and limit treatment options for a patient;

- weaken the **informed consent** of patients on the medical protocols to be followed

People who experience language barriers:

- have **reduced access** to pain treatment services;

- have an increased risk of experiencing security incidents as a result of **communication errors**;

- have an increased risk of **medication errors, complications** and **adverse events**;

- have twice the **hospital readmission** rate;

- are less likely to take **prescribed medications** correctly and more likely to report complications.

Our Action

Objective: Improve access to quality and safe health services in French in Canada

Engaging Health Partners

Mobilize knowledge and promote partnerships between health partners.

Structuring Services

Support capacity-building of health partners.

Consolidating

Integrate these new practices in internal practices of health partners and value successes.

Minorities

Note : OLMCs represent **more** than 5% of the Canadian Population.

A Few Examples and Successes: Standards for Access to Healthcare and Social Services in the Official Languages

The Standard:

- Provides advice to **health organizations** on how to insure quality and safety of health services;
- Offers a clear plan for **decision-makers** to recognize the organizations who provide services to Official Languages Minority Communities;
- Gives a **measurable framework** for the external assessment of health organizations in the delivery of services in both official languages.

A Few Examples and Successes: Self-Guided Virtual Training Platform

Training Platform designed for health managers and improve the capacity to deliver services in French.

- Built on the same principles as the Standard.
- Available in both English and French.
- Provides training credits
- Available modules so far:
 - Core Principles
 - Human Resources Strategy
 - Active Offer Training
 - Guide on Logic Models

A Few Examples and Successes: Community of Francophone and Francophile health students

Through various social, convivial and interdisciplinary activities, Franco Santé aims to:

- **Identify** future Francophone and Francophile health professionals in English-speaking colleges and universities;
- **Raise awareness** on the importance of providing reliable and safe health services in French;
- **Strengthen** their skills in providing health services to French-speaking patients.

A Few Examples and Successes:

Inclusion of the linguistic variable in the health card

The challenge :

- **How** to capture evidence on the use of health services by Francophones?
- **Where** are the services requested?
- **What** kind of services?

A systemic solution:

- Make sure this information is automatically collected in the uptake through the health card.

"What is your preferred language for obtaining medical services?"

Our real impact:

Strengthening social responsibility in health

When we seek to make health partners aware of the specific needs of our communities in order to encourage action and a transformation of practices, with a focus on collaboration and sustainability, we strengthen social responsibility in health.

Social responsibility in health consists of:

- identify the current and future **determinants** and priority health **needs** of the population
- contribute to answering them as adequately as possible
 - by carrying out the appropriate **transformations** in terms of **training, research** and **services**,
 - while integrating the associated values of **quality, fairness, relevance** and **efficiency**
- Engage in a partnership with the main health actors for a **sustainable action** and the assurance of a **better impact** on the health of citizens and populations, at the territorial, national or international level.
